

AMENDMENTS TO THE CLAIMS

1. (Original) An individual wrapping container for wrapping individually an interlabial pad to be held between labia, comprising:
 - a main body containing said interlabial pad
 - and a cover that covers a part of said main body, the cover forming an unwrapping portion at an end edge portion to be unwrapped to open the individual wrapping container;
 - wherein said cover is shaped to have a cut off portion at a place where said individual wrapping container is held when the individual wrapping container is opened, and
 - wherein the individual wrapping container has predetermined region where a finger of a wearer is applied.
2. (Original) An individual wrapping container according to claim 1, characterized in that said end edge portion of said cover is inflected or inclined to a bottom side of the individual wrapping container.
3. (Original) An individual wrapping container for wrapping individually an interlabial pad to be held between labia, comprising:
 - a main body containing said interlabial pad and
 - a cover that covers a part of said main body, the cover forming an unwrapped portion at an end edge portion to be unwrapped to open the individually wrapping container;
 - wherein a surface of said main body has an instruction to show where said individual wrapping container is held when opening the individual wrapping container is unwrapped.
4. (Original) An individual wrapping container according to claim 3, characterized in that said instruction is made visual or touchable.

5. (Original) An individual wrapping container for wrapping individually an interlabial pad to be held between labia, comprising:
- a main body containing said interlabial pad and
 - a cover which overlaps on a part of the main body, the cover having an edge portion forming an unwrapping portion to unwrap said individual wrapping container;
- wherein the main body has a fine projection at least on an internal surface of said main body.
6. (Currently amended) An individual wrapping container according to ~~any one of claims~~ claim 1 –5, wherein said individual wrapping container comprises a container on which a series of sheets for wrapping is wound, and
- wherein said cover comprises an overlapping portion that is formed by overlapping both ends of a wrapping sheet and a vicinity of said both ends, and
 - wherein said unwrapping portion comprises one end of said wrapping sheet, and
 - wherein said individual wrapping container is unwrapped by unfolding said overlapping portion from said unwrapping portion.
7. (Original) An individual wrapping container according to claim 6 comprising:
- an unwrapping portion for sealing the interlabial pad, and
 - a bottom line on the opposite side;
- wherein the dimension of the main body becomes smaller as it proceeds from said bottom line to said unwrapping portion.
8. (Currently amended) An individual wrapping container according to ~~any one of claims~~ claim 1 –5,

wrapping container is set in a range of 105 -- 130% of the dimension in the lateral direction of said interlabial pad.

14. (Original) An individual wrapping container for individually wrapping an interlabial pad to be held between labia, comprising:
 - a main body including said interlabial pad and
 - a cover which overlaps a part of said main body, the cover having an end edge portion forming an unwrapping position to unwrap the individual wrapping container,
 - wherein said cover and said main body are lightly bonded each other at both end portions in a perpendicular direction to an unwrapping direction of the individual wrapping container, and
 - wherein said cover has an angular shape extending toward both sides of said main body from one part of said unwrapping part as a vertex.
15. (Original) An individual wrapping container for individually wrapping an interlabial pad to be held between labia, comprising:
 - a main body containing said interlabial pad and
 - a cover which overlaps a part of said main body, the cover having an end edge portion forming an unwrapping part for unwrapping said individual wrapping container, and
 - wherein said cover and said main body are lightly bonded each other at both ends in a perpendicular direction to an unwrapping direction of the individual wrapping container, and
 - wherein an angle is made by a light-bonded line at both ends where the light-bonding is made and a non-bonded edge line where the light-bonding is not made, the angle which is made on a place other than the cover being an acute angle.
